College of Social Sciences
Department of Social Anthropology
Quiz on Introduction to Social Anthropology

Time allotted 30 minutes

Name _____

Id. No. _____

I. Choose the Correct Answer and Circle your Choice (0.5 points each)

B 1. One is not true about the scopes of Anthropology.

- A. It is broader than history in terms of time coverage
- ☒ B. It focuses only on the so-called 'primitive' society
- C. It covers both biological and cultural aspects of human being
- D. It is interested on where humans were/are living

C 2. Select the one which is not the sub branch of socio-cultural anthropology

- A. Ethnomusicology
- ☒ C. Forensic anthropology
- B. Economic anthropology
- D. Political anthropology

D 3. Anthropology relates with other disciplines of social sciences and differs in

- A. Scope
- C. Research methods
- B. Approach
- ☒ D. All of the above

D 4. Select one which is not true about race

- A. Color and shape difference among human being
- B. Physical difference acquires in the process of adapting different environment
- ~~C. Species difference~~
- ☒ D. Socially constructed category using physical differences

C 5. The oldest stone tool, which discovered in Afar and dated 2.5 million of years, is the interest of

A. Paleoanthropology

B. Historical Archaeology

C Pre-historic Archaeology

D. Historical Linguistics

II. Say "True" if the statement is correct and write "False" for the incorrect statement (0.5 points)

True ~~False~~ 6. Studying different aspects of human being is a curious nature of anthropology rather than holistic nature of anthropology.

True 7. Similarities and differences of current languages is the interest of descriptive linguistic, while how current human being vary is the interest of human variation.

False 8. Cultural relativism approach is quite synonyms with ethnocentrism which tries to understudy a society in its own context.

False 9. Some relates 18th century enlightenment with the emergence anthropology as a discipline.

True 10. Charles Darwin theory of evolution which based on natural selection and survival of the fittest equally applicable to explain societal development using the theory of Social Darwinism.

III. Answer the Following Questions Correctly (1 point each)

11. What is anthropology? in the term etymology anthropology is

greek word which is composed of 'anthropos' and 'logos' which

mean study/science about human kind/human being; it studies
connection b/w cultures and connection among cultures.

- it is study everything ² what a human does
- it study the past, present and also forecast about the future.

12. Explain the difference between ethnography and ethnology

Ethnography is as much as possible a detailed study of specific community. But Ethnology is a science of comparative work tries to sort out the similarities & differences among cultures by using researches made by ethnographers / researchers to reach a theory.

Ethnography

→ have field work / research

→ specific / group community

→ descriptive

→ produce detailed things about specific community

Ethnology

→ no field work but use work of researchers

→ comparative study

→ synthetic

→ it produces a theory or generalization.

13. Explain the contribution of Anthropology

Anthropology contribute to understand our own culture and way of life. it contribute more to know the way of life of other peoples and to appreciate the differences it helps us to be cultural relativistic which is a key to live in peace with other groups, it gives different insight, it used as a tool for development of a given country, it helps us to be more sensitive about our culture, it helps us to avoid the culture of ethnocentrism which considers one's own culture - is superior than others. - it give us holistic view about certain cultures.

14. Explain sub-branches of physical/biological anthropology

Physical / biological anthropology has 2 subbranches which are ^{Human} ^{Therian} ^{Primate}

1. Human evolution - it tries to answer how, when and why we

evolve it has two study styles ① paleoanthropology - Paleo - means old

- it studies fossil / bones of the old man ancestor 3. Primate / Primate

By studying it tries to find out the human near ancestor

primate means near in time it study the human near ancestor

like gorillas and chimpanzees

② human variation - it tries to study colour / shape / physical
study how current human being vary
variations among peoples - it tries to answer why is color
darken happen & color whiten - why some are big & some are short

③ By studying Genes of human being by using
DNA / RNA tries to study human being

15. What do you understand from emic perspective of anthropology? Explain

- In studying anthropology there are two perspectives

which are emic (insiders view) and etic (outsider view)

Anthropology by its nature it is emic perspective

which can't judge any societies practice in relation

with outside world. even if the societies are practice

an harmful practice anthropologist can't judge them that

thing is good / bad but it ^{tries to} understand their cause

to do that action. he studies and leave them

- as an anthropologist is live with a society that study

it has to respect their language, culture, traditional

practices. ... to get information what he want

Good Luck

- anthropologist looks at things based on the way

of the societies he study not from what other

people said about them.
