

M6 T2 REMEMBERED

3, which is not true about cmyc?

- A) It is Over expressed in neuroblastoma
- B) It is overexpressed In burkitt's lymphoma
- C) It has roles in Inhibition of Warburg effect
- D) It Promotes cell cycle
- E)

4 What happens to FOXO after being phosphorylated by AKT in pi3k signaling pathway?

- A) Gets out of nucleus to cytoplasm.
- B)
- C)
- D)
- E)

5 What is use of dermatan binding in FGF signaling?

- A) initiate signaling pathways even without ligand binding.
- B) prolongs the duration of effect of the ligand
- C)
- D)
- E)

6, What is mamalian function of Mtorc1?

- A) Increasing translation and cholesterol synthesis.
- B) Phosphorylating and activating AKT
- C)
- D)

8 recruitment and activation of what protein continues the downstream signaling in EGF?

- A) Shc
- B) Grb2
- C)

10, E7 of human papilloma virus causes cancer by which mechanism?

- A) hyper phosphorylating Rb resulting in activation of Rb gene
- B) hyper phosphorylating Rb causing its inhibition

2) which one is not tumor suppressor gene products?

- A) Cell surface receptor
- B)
- E) none

3) Not true about Retinoblastoma

- A) Sporadic form is bilateral.....

12) PDK1

- A) phosphorylate and activate AKT

16) not true about p53

- A) If it is in small amount it arrest cell cycle
- B) autosomal recessive disorder.....

19) about ezrin

- A) protrusion.....metastasis
