8. Dr Demeke believes that he has a duty to give cardiac clients detailed information During preoperative assessment on the pathology involved in their condition the Expected complications even though the client has indicated that they are not ready or

Name:                     

Therapist:                     

7. A child undergoes surgery to correct a condition with both the mother and the family, who are physicians, to discuss the chemotherapy.

8. If chemotherapy offers a clear and compelling medical benefit to the child, the child has the mother refuse treatment. I am professionally obligated to issue a court order to compel a physician for the child.

12. A mother brings her 18-month-old daughter to your office for a routine physical examination. The child has had no immunizations. Her mother says that they believe in religious freedom and prefer not to immunize their children. You would tell the mother in this situation that:

- A. You respect her (the mother) as a parent and say no more.
- B. The risk faced by immunized children is extremely high.
- C. The mother's refusal to immunize poses a significant likelihood of harm to her child.
- D. The physician should be sure that the child's mother understands the risks of remaining unimmunized and attempt to correct any misconceptions about the degree of risk associated with getting immunized.

13. A 3-year-old child is brought to your office with a fever and stiff neck. You are quite certain the child has meningitis. When you discuss the need for a spinal tap and antibiotic treatment, the parents refuse permission, saying, "We'd prefer to take him home and have our pastor pray over him." How should the physician handle this?

- A. The physician should do what the parents request to take the child home.
- B. The physician should call the parent's religious leader and have him come to the hospital before providing standard medical therapy.
- C. The physician has no duty to provide treatment to the child when the parents refuse treatment.
- D. When efforts to obtain parental permission to treat the patient fail, the physician is justified in seeking legal help or may be legally authorized to proceed with the procedure and treatment of meningitis.

14. A young accident victim has been in a permanent vegetative state for several months and family members have insisted that "everything possible" be done to keep the patient alive.

Should you honor the family's request?

- A. The request must be honored because the family members insisted to do "everything possible."
- B. The request should be honored because of absence of a court order to withhold treatment.
- C. The request should NOT be honored because it is unreasonable.

34. Which of the following is not a reason for terminating a clinical trial?
- A. Study period is very short
  - B. The trial is conducted as per the approved protocol
  - C. The data produced are promising
  - ☒ D. There are significant changes that affect participants consent

35. Which of the following statement is true regarding in decision making process of ethical dilemmas

- A. patients autonomy has to be respected irrespective of its mental capacity and legally competency
- B. Country law or guideline has minimal role in analysing ethical dilemmas
- C. Looking into how similar ethical dilemmas resolved is not beneficial for decision making
- ☒ D. Social and the cultural value of the individual has to be looked into decision process
- E. Not necessary to look into the burden of other stakeholders except the individual.

36. All of the following characterize guidelines used for Ethical clinical analysis except

- A. Impartial
- B. Objective
- ☒ C. Complex
- D. Rational
- E. Consistent

37. Which of the following statement is /are correct

- A. Patients' preference of treatment mainly related to ethical concept of respect for patient autonomy.
- B. contextual features closely related to loyalty and fairness and may consider patients religious and / or cultural values
- C. Quality of life for individual patient is best defined by the treating physician
- D. Ethical concept of beneficence and nonmaleficence best addressed as physician discussing the medical indication of an intervention
- ☒ E. All except C

38. A three year old child present at the outpatient department with high grade fever, vomiting with neck stiffness. The physician wanted to do lumbar puncture. The mother refused the procedure and decided to take the child home and he accepted her decision without any discussion and left to see another patient and the mother took the child home.

Which of the ethical principles are at stake?

- A. Autonomy
- B. Beneficence, Non-maleficence
- C. Justice and autonomy
