

Role Play: Nausea & Vomiting of Pregnancy (NVP) and Contraception

Clinician–Client Counseling
Scenario

1. Opening & Rapport

- Clinician greets client and asks about her symptoms.

- Client reports nausea and vomiting at 9 weeks of pregnancy.

2. Assessment

-
- Frequency of vomiting
-
- Ability to tolerate fluids
-
- Weight loss or dehydration signs
-
- Conclusion: Mild-moderate NVP

3. Non-Pharmacologic Management

-
- Small, frequent meals
-
- Avoid strong odors, spicy or fatty foods
-
- Morning crackers before getting out of bed
-
- Ginger tea or tablets
-
- Hydrate between meals

4. Pharmacologic Management

- First-line: Vitamin B6 + Doxylamine

- Alternatives:
Antihistamines,
Metoclopramide

- Severe cases:
Ondansetron, IV fluids

5. Contraception Counseling

- Discussion of postpartum plans
- Safe postpartum options:
 - Progestin-only pills
 - Injectables
 - Implants
 - IUDs

6. Closing the Session

- Clinician provides reassurance and written instructions.
- Advises follow-up if symptoms worsen.
