

Management Functions

Function: is defined as a broad area of responsibility composed of many activities aimed at achieving a predetermined objective.

Functions of Management Include

1. Planning
Planning(p)
 2. Organizing
 3. Staffing
Implementation (I)
 4. Directing
 5. Controlling
Evaluation (E)
- 

☐ In addition to these three broad sequential functions Planning, Implementation & Evaluation (PIE).

Two continuous functions of management are:

- ☐ Communication
- ☐ Decision-making

Management function ...

COMMUNICATION

It is necessary for sharing ideas/information between the

- ☐ Manager
- ☐ Staff
- ☐ Community

During the process of planning, implementation and evaluation.

DECISION-MAKING

Is employed during

- Planning each one of them
- Implementation decision-making as a task
- Evaluation

Functions of Management

- ❑ Basic management functions or activities that make up the management process set by Foyl are:
 - Planning
 - Organizing
 - Leading
 - controlling

Cont...

- The two continuous functions of management are:-
 - Communication
 - Decision- Making

Planning is a primary management function. Why?

Cont..

b/c

- Through planning managers clearly put and outline exactly what organizations must do to be successful.

Planning

- ❑ It is the process of establishing goals and a suitable course of action to achieve the goals.
- ❑ Helps to deal with the present and anticipate the future.
- ❑ It involves what to do, how to do and when to do

Why Do Managers Plan?

Why Do Managers Plan?

- ☐ Planning provides direction to managers
- ☐ Reduces uncertainty by forcing managers to look ahead
- ☐ Minimizes waste and redundancy
- ☐ Finally, planning establishes the goals

plan

- ❑ are documents that outline how goals are going to be met.
- ❑ usually include
 - resource allocations,
 - schedules,
 - and other necessary actions to accomplish the goals.

TYPES OF PLAN

The most popular ways to describe organizational plans are

- ☐ breadth (strategic versus operational),
- ☐ time frame (short term versus long term),
- ☐ specificity (directional versus specific), and
- ☐ frequency of use (single use versus standing).

Strategic versus operational

Strategic plans

- Apply to the entire organization and establish the organization's overall goals.
- Are broad, long term, directional, and single use

Operational plans

- Encompass a particular operational area of the organization
- Are narrow, short term, specific, and standing.

Long term versus short term

- long-term plans - with a time frame beyond three years
- Short-term plans - one year or less.

Specific versus directional

Specific plans

- ❑ Plans that are clearly defined and leave no room for interpretation
- ❑ State objectives in a way that eliminates ambiguity and problems of misunderstanding

Directional plans

- ❑ Flexible plans that set out general guidelines.
- ❑ Provide focus but don't lock managers into specific courses of action.

Single use versus standing

Single-use plan

- ❑ is a one-time plan Specifically designed to meet the needs of a unique situation
- ❑ detailed courses of action that will not be repeated in the same form in the future - Non repetitive

Program: Covers relatively large set of activities and outlines:

Projects: Smaller, separate portions of programs- Limited in scope

Budgets : Financial resources allocated for certain activities in a given time

Standing plan

- ❑ Ongoing plans that provide guidance for activities performed repeatedly
- ❑ Standing plans include
 - policies,
 - rules, and
 - procedures

Cont...

Policy

- ❑ A standing plan that establish general guideline for decision-making
- ❖ Helps to take action consistent with organizational goals
- ❑ Indicates which decisions can be made and which can not.

Cont...

Rules

- ❖ Detail specific mandatory actions to be taken to respond in a given situation

Procedures

- ❖ Detailed specific guidelines for handling organizational actions that occur regularly.
- Standard-operating methods
- Detailed set of instructions for performing a task

The importance of planning:-

- ❑ it helps Coping with future uncertainty and change
- ❑ Focus attention on objectives
- ❑ It obtains economical operation
- ❑ Helps foreseeing and identifying potential risks.

Health Planning

Planning: is Systematic method of **trying to attain explicit objectives for the future** through the efficient and appropriate use of resources, available now and in the future.

Health Planning: is the process of defining community health problems, Identifying needs and resources, establishing priority goals, and setting out the administrative action needed to reach those goals.

Health Planning...

Purpose

Coping with future uncertainty and change

Focuses attention on objectives

Obtains economical operation

Provides performance standards and facilitates control

Helps foreseeing and identifying potential risks

Types

There are two types of planning:

1. Strategic planning

- Often referred as **allocative planning**
- Normally **five years or more**.

2. Tactical/operational planning

- May be referred to as **activity planning**.
- It covers a short period of time, medium term- usually **one-year**.

STRATEGIC PLANNING

1.1 What is Strategic Planning?

Strategic Planning is the process of determining **what an organization intends** to be in the **future and how** it will get there. It is finding the **best future for your organization** and the **best path** to reach that destination.

Due to the rapid rate of change of today's world, it has become necessary for every dynamic organization to keep their plan as current as possible through strategic planning.

Strategic planning is often used in place of **long range planning**.

TACTICAL/OPERATIONAL PLANNING

Tactical/operational planning is short-range planning that emphasizes the **current operations of various parts of the organization.**

Short-range is defined as a period of time extending only about **one year or less into the future.**

Managers use tactical/operational planning to outline what the **various parts of the organization must do** for the organization to be successful at some point

Tactical plans usually are **developed for organizations in the areas of production,** marketing, personnel, finance and plan facilities.

Comparing and coordinating Strategic and Tactical Planning.

In striving to implement successful planning systems within organizations, manager must remember several basic differences between strategic planning and tactical/operational planning.

Comparing and coordinating ...

1. upper-level managers generally have better understanding of the organization **as a whole than do lower-level managers**, and lower-level managers generally have **a better understanding of the day-to-day organizational operations** than do upper-level managers; so, strategic plans are usually developed by upper-level management and tactical plans by **lower-level management**.

Comparing and co-ordinating ...

2. Tactical planning emphasizes analyzing the everyday functioning of the organization
 - facts on which to base strategic plans are usually more difficult to gather than are facts on which to base tactical plans.

Comparing and coordinating ...

3. strategic and tactical planning differ in the **amount of detail** in the final plans.

Since strategic plans are based primary on a **predication of the future** and tactical plans on known **circumstances that exist within the organization**, **strategic plans are generally less detailed than tactical plans.**

Comparing and coordinating ...

4. Strategic focuses on the long term and tactical planning on the short term, strategic plans cover a relatively long period of time.

☐ See clear presentation of the deference on the following table

<i>Area of differences</i>	<i>Strategic Planning</i>	<i>Tactical Planning</i>
Individuals involved	Developed mainly by upper-level management	Developed mainly by lower level management
Facts on which to base planning	Facts are generally difficult to gather	Facts are generally easy to gather
Amount of details in plans	Plans contain relatively little detail	Plans contain substantial amount of detail
Length of time plans cover	Plans cover long periods of time	Plans cover short periods of time

Major differences

- ❑ In spite of their differences, tactical and strategic planning are **integrally related**.
- " In general, strategic planning is concerned with the longest period worth considering. Tactical planning is concerned with the **shortest period** worth considering. Both types of plans are necessary. **They complement each other.***
- ❑ We can look at them separately, even discuss them separately, but we **cannot separate them in fact**"

Steps of planning

Steps of planning

In the planning process, there are six steps

1. Situational analysis
2. Selecting priority problems
3. Setting objectives and targets
4. Identifying potential obstacles and limitations
5. Designing strategies
6. Writing the plan

I. SITUATIONAL ANALYSIS

□ CAN BE THROUGH
SWOT ANALYSIS

Health and demographic data use

SWOT Analysis

SWOT (**strengths and weakness, opportunities and threats**) is a **strategic planning tool** that matches internal organizational strengths and weakness with external opportunities and threats. By reviewing strengths, weaknesses, opportunities and threats, a useful strategy for achieving objectives will become evident. SWOT Analysis defines the relationship between internal and external appraisals in strategic analysis. It is an **exercise in identification and analysis**

SWOT Analysis....

In the health sector,
strengths may be considered **availability of resources and trained human power**.

Weaknesses include **lack of managerial talent and obsolete facilities**.

Threats include **adverse cultural believes towards modern medical practice and growing cost of essential drugs**.

Opportunities are **clear and supportive government policies** and presence of a **functional health committee** in the communities.

SWOT ANALYSIS: A FRAMEWORK FOR SELECTING STRATEGIES: SWOT MATRIX

SWOT Analysis example for BLH.

	Internal	External
Positive	Strengths 1	Opportunities 3
Negative	Weakness 2	Threats 4

II. SELECTING CRITICAL PRIORITY PROBLEMS.....

The second one is **the decision as to how health and health need is viewed**. *Proceeding section examined a number of possible different perspectives on health and health needs.*

As we have seen, assessment of health needs and priorities is not a simple technical issue.

**It is useful to group problems under common headings:
Examples**

Environmental problems

- Poor sanitation
- Over crowding
- Lack of safe drinking water

Disease or Health problems

- Malaria
- Malnutrition
- Respiratory Diseases
- Diarrhoea

Socio-Economic Problems

- Low per capital income
- Illiteracy
- Poor equity in distribution of health services
- Cultural and religious habits

Health service problems

- In sufficient drugs and materials
- Lack of qualified personnel
- Difficulty in visiting outlying areas

II. It is useful to group problems under common headings

.....

- Making such groups of problems helps seeking **common solutions**.
- However, there are always **discrepancies** between the **health needs** (problems that **need to be solved**) and **available resources**.
 - Hence, the planner is obliged to take certain problems (priority problems) first.
- Priority problems are often selected by **setting selection criteria** and giving scores for each problem according to these criteria.

The selection criteria for priority setting are:

Magnitude of the problem

Degree of severity (consequent suffering and disability)

Feasibility-in terms of cost effectiveness and social acceptability of intervention.

Sustainability in terms of resources and organizational capacity

Community concern

Political and social acceptability with consideration of equity

Consistence with multi-sectoral approach

Consistence with governmental planning and budgetary system

Clearly defined system with donors (if linkage exists)

The selection criteria

Ranking problems: which health problems are most important? This can be done by using criteria on a five-point scale

- 5 points-very high
- 4 points-high
- 3 points-moderate
- 2 points-low
- 1 point-very low

III. SETTING OBJECTIVES AND TARGETS

Let us first define some related terms, a clear understanding of which is important for a rational planning.

Goals, aims, objectives, and targets

Goals, aims, objectives and targets are all ways of describing the desired direction of a service. They differ in terms of **breadth and detail**.

Goals: Are broad statements. There is generally one goal for a service.

This might be: ' **Health for all by 2020 and beyond.**'

SETTING OBJECTIVES AND TARGETS.....

Aims: There are a number of aims relating to the goal. They are specific to particular health problems.

One might be: 'To raise the nutritional status of women and children.'

Objective: For each programme aim, there may be a number of objectives, which are specified in measurable terms. An objective for the above aim might be: 'To ensure that 95 per cent of children are adequately nourished.'

Targets: For each objective, there may be various targets, which specify various points on the way to the attainment of the objective. They are defined in relation to a point in time. For example, a target for the above objective might be: 'To ensure that 75 per cent of children are adequately nourished by 2020.'

SETTING OBJECTIVES AND TARGETS.....

If the programme is made to have an objective and target, it must be **SMART**:

S -Specific

M -Measurable

A -Achievable

R -Realistic

T -Time-specific/Time-framed

Example

By the end of 2020, 90% of **eligible children** will be vaccinated against ten target diseases in Omo Nada Woreda.

Setting objectives...

- ❑ **Specific:** who? (target population and persons doing it) what (action/activity)
- ❑ **Measurable:** How much change is expected?
- ❑ **Achievable:** can be realistically accomplished given current resources and constraints
- ❑ **Realistic:** addresses the scope of the health program and proposes rescannable program steps
- ❑ **Times-framed:** provides a timeline indicating when the objective will be met

IV. IDENTIFYING OBSTACLES AND LIMITATIONS

After setting **objectives and targets** the planner should ask himself/herself about the **presence of any situation (obstacle/limitation)** that may prevent the achievement of each objective and target.

The limitations/obstacles may be:

Resources:

People

- Lack of interest
- No skilled people

Equipment

- Not available
- Expensive (if available)

Money

- No budget

Time

- People may not have time

Information

- Hard to find
- Statistics not available

IDENTIFYING OBSTACLES AND LIMITATIONS...

Environmental obstacles:

When making a plan the environment should be reviewed to see whether it presents any specific difficulties, such as:

Geographical features

Which would be important for building roads, marketing goods, or transporting patients to hospitals; for instance, mountains, rivers, lakes may be serious obstacles to delivering adequate health services in some areas.

Climate

Which may influence type of building and nature of health problems?

Technical difficulties

Related to the technical development of society, for instance, an electric centrifuge is useless in a health centre where there is no electricity.

Social factors

Which are the most serious obstacles? There may be customs or taboos that operate against the plan; people may be prejudiced against new ideas, or there may be laws or regulations (good or bad) that prevent certain activities.

<i>Objective</i>	<i>Obstacles</i>	<i>Analysis</i>		<i>Cannot be changed</i>
		<i>Removed</i>	<i>Modified</i>	
1. To provide trained personnel for all women in child birth by 2020	◆ Shortage of Midwives ◆ Insufficient maternity beds ◆ Insufficient material and money	◆ Train and utilize TBA ◆ Midwives support TBA to care for women at risk	◆ Build a simple shelter	◆ Education level of women
2. To provide antenatal care to 60% of pregnant women	◆ No accommodation ◆ Women not interested	◆ Particular care for women at risk		

V. DESIGNING THE STRATEGIES

Once **objectives and targets** are set, the planner assesses the **different ways (strategies)** for achieving them.

Choosing the best strategy again **entails analyzing resources available** and needed for each strategy.

The **potential strategies** often include **technology** to be applied, **procedures to be used** and **defining the role of communities and other sectors**.

VI. WRITING THE PLAN

The purposes of writing the plan are:

- To **request funds or resources** from the government or funding agencies
- For **monitoring and evaluating** the implementation process by all concerned

□ A plan can be **written in several ways**.

- Some organizations may require plans to be written on specific way.

GANTT CHART-FOR CONDUCTING A SURVEY

Activities	Responsible Officer	Jan	Feb	Mar	Apr	May	Jun
Briefing of District leaders	MR A	* *					
Briefing of Villagers	MR B	* *					
Design of survey	MRS X	* *					
Selection and Training of Staff	MR Y	* *					
	MR C	* *					
Conduct of survey	MR D	* *					
Analysis of report	MR E	* *					
Provision of transport and logistic support		* *					

The main weakness of the GANTT chart, it lacks information on interrelation of tasks to be performed.

ii Organizing

- ❑ It is the process of arranging and allocating work, authority and resources among organization members to achieve goals.
- ❑ It involves establishing
 - authority & responsibility relationships;
 - division of work,
 - job design,
 - coordination,
 - information and feedback systems in the organization.

Cont..

- Organizing:-managers coordinate the human and material resource of the organization.
- ❑ Organizing creates a mechanism to put plans into action.
How?
- ❑ Through Assigning the tasks developed during planning to individuals/groups within the organization.

iii Leading

Leading (directing, motivating, and communicating)

- ❑ It is the process of directing and influencing the task-related activities of group members or an entire organization.
- ❑ The process of guiding the activities of organization members in appropriate direction.
- ❑ Influencing, directing, (activate ,motivate)

V Controlling

- ❑ The process of ensuring/ conforming the actual activities in relation to planned activities.

A function for which managers:

- ❑ Establish standards of performance
- ❑ Gather information and Measure current performance
- ❑ Compare performance with standard
- ❑ Taking corrective action
- ❑ Rewarding

Why is control so important t...

- ☐ because it's the only way that managers know whether organizational goals are being met and if not, the reasons why.
- ☐ employee empowerment.
- ☐ Can provide information and feedback on employee performance and

Cont...

- ❑ minimize the chance of potential problems.
- ❑ protect the organization and its assets
- ❑ Comprehensive controls and backup plans will help assure minimal work disruptions.

Decision Making

- ❑ A function made at all levels from planning up to controlling.
- ❑ Senior managers make policy decisions and resource allocation decisions that affect the entire and various parts of the organizations.
- ❑ Middle- and first-level managers make decisions about allocating and utilizing resources provided by senior management within their areas of authority and responsibility.

communication

- ❑ It is a process by which people attempt to share meaning via the transmission of symbolic messages.
- ❑ It consists of a wide range of behaviours that include listening, reading, writing, talking and thinking.

four forms of communication:

- Intrapersonal: communication with oneself.
- Interpersonal: person-to-person communication.
- Mass communication: communication through the mass media.
- Organizational communication: communication within an organization and among organizations.

Importance of communication

- ❑ Common need for management processes: planning, organizing, leading and controlling,
- ❑ Help to identify and utilize talents available, and

END
